

Model 22302
FlashLink. Real-Time Reusable Data Logger

Know the temperature, humidity, and location of your products in real-time

Track truck delivery routes, get automated alerts when temperature excursions occur

The **FlashLink**® Real-Time Reusable Data Logger monitors trucks along delivery routes and reports temperature data to a cloud-based dashboard where it's always visible. The logger alarm provides alerts when out of range conditions occur. With the Geofence option, personnel are notified when trucks depart and return to starting location, improving efficiency throughout the cold chain.

- Monitor location, temperature, and humidity
- Save time with better management of delivery routes
- Reduce labor with automated monitoring
- Know when trucks depart and return to starting point
- Archive data for FSMA, HACCP and regulatory compliance
- Ideal for deliveries from distribution centers to stores, courier service and last mile
