Model 22371
FlashLink RTL 3G Temperature & Humidity
Reusable Data Logger

Improve loading dock efficiency

Monitor truck cool down in real-time, get automated alerts when ready to load

Proper cold chain management requires that trucks and containers are cooled to correct shipping temperature prior to loading with pre-cooled products.

The **FlashLink** Reusable Real-Time Mini Data Logger monitors trucks during cool down and reports temperature data to a cloud-based dashboard where it's always visible. The logger alarm limit can be set to loading temperature and an alert will be sent so that dock supervisors know which trucks are ready, and improve efficiency by streamlining the loading process.

- Save time with better management of dock traffic
- Reduce labor with automated monitoring
- Know when trucks reach loading temperature
- Archive data for FSMA, HACCP and regulatory compliance
