

EDI Services

Dapicon, Inc. is an innovator in supply chain solutions. Having significant experience in the grocery retail and foodservice industries, as well as corresponding best practices, protocols, and technologies, Dapicon has a unique perspective built from every facet of the supply chain. When coupling these experiences with direct input from our customers, we create tangible solutions with vetted use-case scenarios that make our industry better, more efficient, and more responsive.

Although a business norm for over 40 years, those companies exposed to EDI understand that it does not come without its challenges. With over 30 years of experience working with and creating new EDI transactions/versions while with GS1, Dapicon removes the complexity of EDI from your plate and does the heavy lifting for you. You no longer have to worry about mapping, communication protocols, EDI translators, versions, standards, conditional/optional/mandatory fields, onboarding, cross references, etc. Our professional PSRs (Partner Service Representatives) take care of that on your behalf and give you flexibility on sending/receiving data from our platform.

We do all of this with great care and customer attention. Our fee structure is simple and, as you will find, the most competitive in the market. We charge a one-time fee to get you set up in our system and then charge a per transaction fee for all EDI transactions sent through our system. No additional charges. You heard that right, no additional charges.

Automate critical trade documents with EDI services

Using EDI (or Electronic Data Interchange) for exchanging critical business transactions between buyers and sellers for documents such as Purchase Orders, Invoices, Ship Notices, and many other documents has been the norm for over 40 years.

Be at peace knowing your transactional data is secure

EDI is a proven and reliable technology for exchanging information. The benefits of EDI include reduced operational cost by eliminating redundant information, reducing manual reconciliation of information, correction of data entry errors, fewer IT resources needed, easy access to historical records, improved trading partner relationships and more. As technology has advanced, EDI systems today are now cloud-driven and reduce operating costs and overhead, provide higher levels of technical support and security, and allow instant access from anywhere in the world.

A woman with dark hair, wearing a blue denim jacket, is sitting at a wooden desk in a warehouse. She is looking at a laptop screen and has her hand on the keyboard. In the background, there are several yellow cardboard boxes stacked on shelves. The text 'Ready, on-demand data retrieval and analytics' is overlaid on the right side of the image.

Ready, on-demand data retrieval and analytics

We are with you every step of the way

Onboarding a trading partner can be a long and tedious process. Our PSRs (Partner Service Reps) will work with you step-by-step until you and your trading partners have been successfully onboarded.

Let our PSRs help you through what is mandatory, optional, and conditional. We are the EDI experts and will work diligently to ensure all of your data is mapped correctly to your trading partner and vice-versa.

To ensure synchronicity between your data and that of your trading partners, it is critical that locations are associated with the correct location number and that the products are associated to the correct product number. This can be confusing and difficult. Not to worry, we have you covered here as well and can do magic with your CSV files.

Our features were built on industry best practices and we use technology to fulfill those business practices, not the other way around. We can help you anticipate any problems that might arise from the data.

Dapicon understands the companies that participate in the supply chain and the complex array of requirements, giving you and your trading partners comfort in knowing both your business and technical requirements are met.

Trading Partner Expertise

As an EDI provider, Dapicon has expertise in the business processes included with each EDI transaction and can manage the implementation and operation of these transactions for all participants.

As your EDI provider Dapicon has a deep knowledge of how your trading partners want to work with you. These partners may include shippers, retailers, grocers, distributors, transportation companies, and import/export service providers.

Dapicon has expertise in order fulfillment processes which can vary widely based on your distribution methods. These may include shipments directly to distribution centers or direct store deliveries conveying accurate package dimensions for loading and/or inventory planning, proper utilization of industry standards, labeling and data capture technologies, and cross-dock shipments.

Another option is VMI (Vendor Managed Inventory), whereby the supplier manages the buyer's warehouse or store inventory based upon data sent via EDI to the supplier.

EDI is not a one-size-fits-all solution. Every business has specific needs based on their business practices.

Dapicon will get your solution up and running with minimal work on your part. Once you have decided the type of business transactions that are important for your business (purchase orders, invoices, ship notices, load tenders, booking confirmations, item specification, pricing information) Dapicon will assign a project team that will include experts in project management and solution design. Together with our expertise in the supply chain, Dapicon will help you create trading partner maps and workflows to ensure accurate capture and interpretation of the data sent and/or received. Dapicon will manage any issues that may come up during the implementation process, so you don't have to.

Dapicon provides a user friendly EDI Partner Portal to manage foundational transactions

- Dashboard with transactions sent/received/acknowledged/overdue
- Custom settings and alerts
- Create trading partners
- Utilize Implementation Guides
- Create envelopes

 - Provide onboarding, training, testing, EDI mapping, product catalogs, location catalogs, product cross referencing
 - Provide training and consultation on EDI standards, GS1 standards, PTI milestones, Barcode standards, automated receiving, warehouse pick accuracy with VPC (voice pick

Don't have EDI software to initially create the transaction? We've got you covered

We can process files received from your ERP system, order entry system, warehouse management system, transportation management system, or home-grown system via APIs (Application Program Interface). We can also process your products and locations catalogs via an Excel spreadsheet or CSV file.

Still having problems connecting? EDI-Assisted to the rescue!

For those who cannot do EDI on their own, or do not have the ability to send an API, Dapicon has created an EDI-Assisted program that enables users to log onto our platform and quickly create EDI transactions on their own. We use the data from a buyer's purchase order to create a draft of the corresponding invoice or ship notice. The user can then make the appropriate changes and/or additions and press a button to create an EDI transaction. We take care of the EDI Trading Partner requirements so that you don't have to.
